

Cube3

Locate, Monitor and Manage:

Any transport or service business wanting to excel in today's competitive marketplace needs real-time, continuous, accurate information on every vehicle to minimize costs, maximize performance, and offer **new value-added products and services**.

Navman Wireless delivers

Navman designs and manufactures its GPS modules and devices, allowing more control over quality, demand and reliability than *any other player in the industry*. Enjoying a failure rate of **less than 1%**, the numbers speak for themselves.

A resilient, reliable device

The Navman Cube3 is a low-profile, vehicle-mounted satellite/cellular tracking device with various covert options to suit **every customer requirement**.

The Cube3 provides:

- **Real-time** GPS location and other vehicle information
- **A compact**, solid, tamper-proof, one-piece unit
- **Easy** installation

Key innovative features in the new Cube3

- Accelerometer to enable advanced movement applications like **driver scoring** and **coaching** and **stolen vehicle notification**
- SirfStar III GPS providing the **most advanced** GPS chipset in the marketplace
- Internal Battery to allow data transfer after shut-off and in severe accident situations

The core of advanced vehicle and driver information and services

- **Integrate** with messaging devices to facilitate real-time driver communication regarding activities
- **Connect** with telemetry inputs to offer added driver safety and vehicle information and security
- **Interface** with a navigation device to eliminate lost vehicles, improve on-time performance, and customer service
